## INSPIRATION

Hollys inspiration came from a vintage Kodak Brownie “Holiday Flash” camera found within the depths of eBay and a pair of eyelashes from a convenience store.

As an artist, I allow my robots to reveal their personalities. When I find parts that reveal a unique character, glance, or attitude, the identity of the robot is born. Adding lighting to Holly enhances her fun-loving character and charm.

## PERSONALITY

Meet Holly, my fashionista party bot. Holly sees herself as a fashion influencer and is always dressed to the “T”. She never goes out without her false eyelash and her earrings. Her aluminum pumps keep her on the dance floor all night where she is the life of the party. Be careful though, if you look into her eye for very long, you might fall in love with her!

## OPERATION

Holly is user-friendly. She has an on/off switch conveniently located on her bottom. She is powered by the provided 6V power supply. When turned on, her eye projects a beautiful light beam and her jetpacks glow brightly.

## DISPLAY

Holly is a cutie. She stands securely on her beautiful aluminum pumps.
