INSPIRATION

Mrs Nelson's inspiration came from an aluminum colander found at Goodwill. Nelson had just been completed and I could immediately see it as a skirt.

As an artist, I allow my robots to reveal their personalities. When I find parts that reveal a unique character, glance, or attitude, the identity of the robot is born. Adding lighting and tech to Mrs Nelson enhances her glamorous persona.

PERSONALITY

Mrs Nelson is yin to Nelson's Yang. Beyond the glitz and glamour of her jet-setting lifestyle with "botstar" partner Nelson, she channels her love for animals by donating all proceeds from the sale of her signature faux-cheetah belt with a rivet buckle and her see-through aluminum cone skirts to her non-profit "Bots for Furry Friends".

OPERATION

Mrs Nelson is user-friendly. She has an on/off switch conveniently located on her front. She is powered by the provided 12V power supply. When turned on, Mrs Nelson's eyes, jetpacks and feet illuminate. Just for fun, she plays random audio tracks from her SD card when a human is nearby.

DISPLAY

Mrs Nelson stands fashionably on her landing pods and is stable on any level surface.
