INSPIRATION

Sunbeam’s inspiration came from his audio visual connector head. When paired with an iron in my robot supply box, his personality as a space racer was born

As an artist, I allow my robots to reveal their personalities. When I find parts that reveal a unique character, glance, or attitude, the identity of the robot is born. Adding lighting and tech to Sunbeam creates a spaceship in flight and perception of speed!

PERSONALITY

Sunbeam is a champion S1 space racer. Sunbeam is a true competitor and his no-holds-barred attitude has sometimes landed him in hot plasma with his competitors. He is the youngest winner of planetary and galactic titles, with true jet-to-jet races stunning audiences and competitors. While an aggressive competitor, and not afraid to speak his mind, he can be surprisingly shy. Sunbeam is a true racing celebrity and intergalactic favorite!

OPERATION

Sunbeam is user-friendly. He has an on/off switch conveniently located on his base. He is powered by the attached 120V power cord. When turned on, the spaceship, jetpacks and base illuminate rocketing Sunbeam to racing victory.

DISPLAY

Sunbeam is mounted on a heavy base. This base supports his cantilevered spaceship as it banks into a turn. Safe on any level surface.
